Modelling and Numerical Methods

Lecture 4
Conservation Equations and Rheology

Outline

- Conservation equations
- Energy equation
- Constitutive equations: Rheology
- Elasticity and Wave Equation
- Newtonian Viscosity and Navier Stokes

Learning Objectives

- Learn main conservation equations used in continuum mechanics modelling and understand what different terms in these equations represent
- Be able to solve conservation equations for basic analytical solutions given boundary/initial conditions.
- Understand basic properties of elastic and viscous rheology and understand how the choice of rheology leads to different forms of the momentum conservation equation
- Using tensor analysis to obtain relations between the main isotropic elastic parameters

Continuum Mechanics Equations

General:

- 1. <u>Kinematics</u> describing deformation and velocity without considering forces
- 2. <u>Dynamics</u> equations that describe force balance, conservation of linear and angular momentum
- 3. <u>Thermodynamics</u> relations temperature, heatflux, stress, entropy

Material-specific

4. <u>Constitutive equations</u> – relations describing how material properties vary as a function of T,P, stress,.... Such material properties govern dynamics (e.g., *density*), response to stress (*viscosity*, *elastic parameters*), heat transport (*thermal conductivity*, *heat capacity*)

Thermodynamics: Conservation of Energy

- First law of thermodynamics
- Preservation of energy, i.e any change in kinetic or internal energy is balanced by work done and heat used/produced $\frac{D(K+U)}{D} = W + Q$

K- kinetic energy, U- internal energy, W – power input, Q – heat input

• Let's start with the form that describes preservation of thermal energy, in 2-D

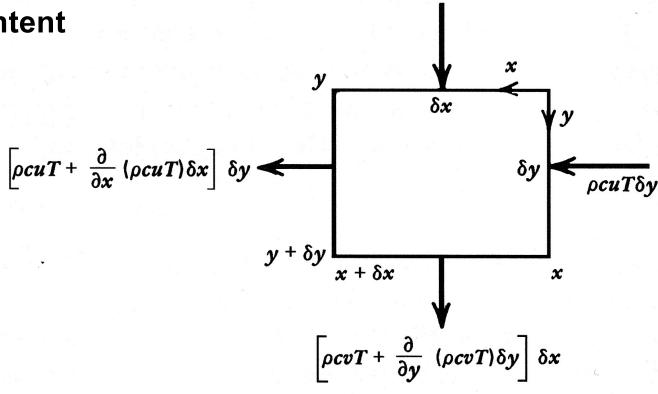

Spatial, constant ρ , C_P , k, incompressible

no heat sources

$$\frac{\partial(\rho C_P T)}{\partial t} \delta x \delta y$$

Advection

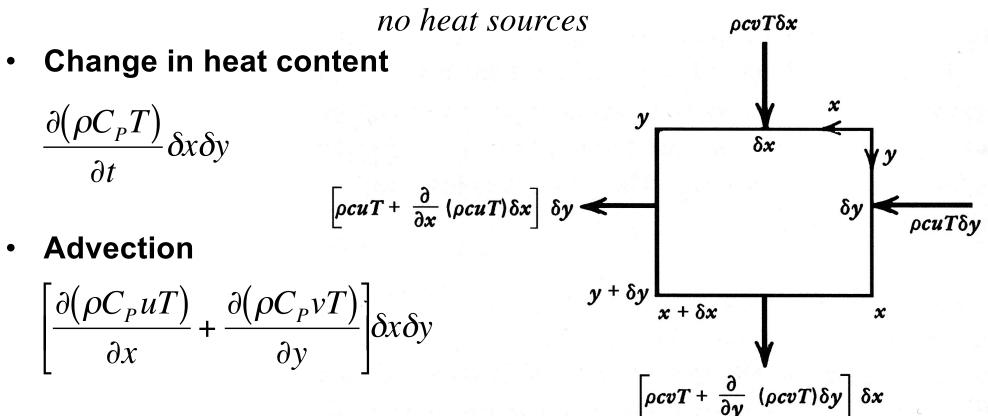

Conduction

$$C_P$$
 – heat capacity $(J/kg/K)$
 u,v - velocity

 $\rho cvT\delta x$

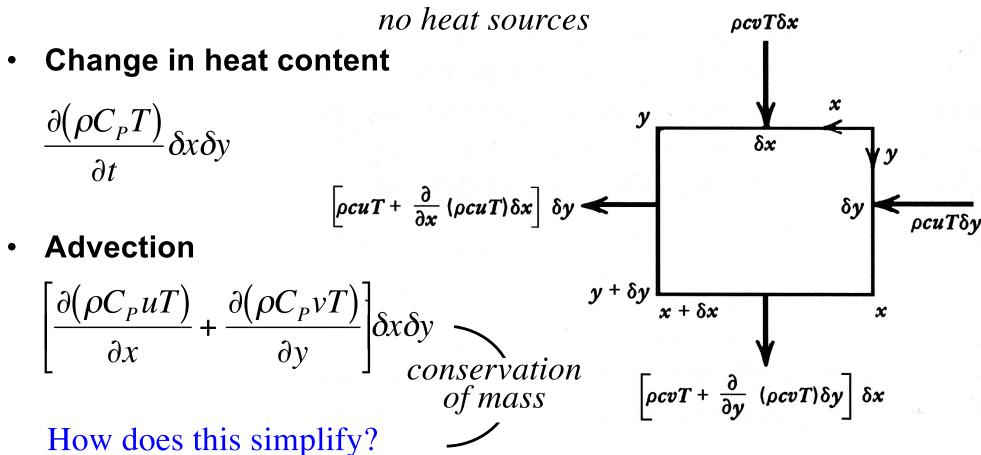

Spatial, constant ρ , C_P , k, incompressible

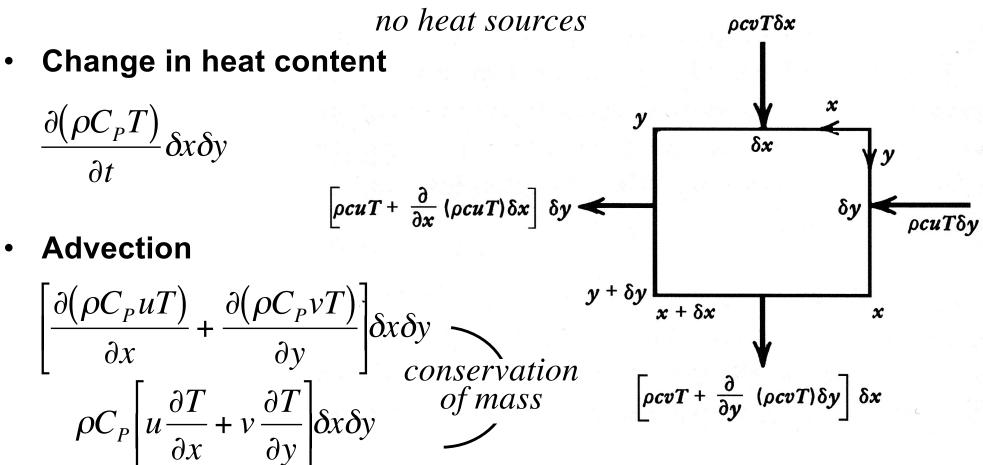

Conduction

$$C_P$$
 – heat capacity $(J/kg/K)$
 u,v - velocity

Spatial, constant ρ , C_P , k, incompressible

Spatial, constant ρ , C_P , k, incompressible

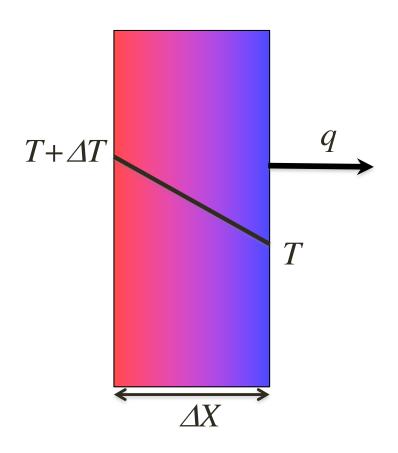

Conduction

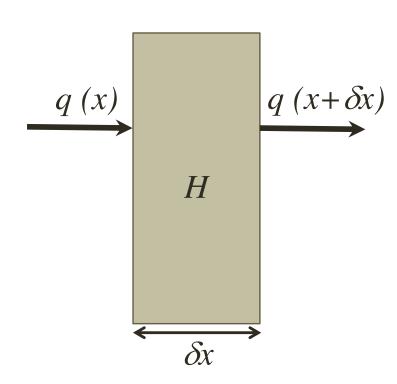

Fourier's Law for conduction

- *Heat flux*, q, = heat/area = energy/time/area, unit: J/s/m² = W/m²
- Heat flux proportional to temperature gradient
- Minus sign because heat flows from hot to cold
- Constant of proportionality: *thermal conductivity*, *k*, unit: W/m/K

$$q = -k \frac{dT}{dx}$$

1-D Steady State Conduction

$$-k\frac{d^2T}{dx^2} = \rho H = A$$

net heat flow/unit area/unit time =

$$q(x+\delta x) = q(x) + \delta x \frac{dq}{dx} + \dots$$

$$q(x+\delta x) = q(x) + \delta x \frac{dq}{dx} + \dots$$

$$q(x+\delta x) - q(x) \approx \delta x \frac{dq}{dx}$$

$$q(x + \delta x) - q(x) \approx \delta x \frac{dq}{dx}$$
$$\delta x \frac{dq}{dx} = \delta x \left[\frac{d}{dx} \left(-k \frac{dT}{dx} \right) \right]$$

$$\delta x \frac{dq}{dx} = \delta x \left[-k \frac{d^2 T}{dx^2} \right] \qquad for constant k$$

heat produced = $\rho H \delta x = A \delta x$

H - heat production rate/unit mass (W/kg)

A – heat production/unit volume (W/m³)

Spatial, constant ρ , C_P , k, incompressible, no heat production

 $\rho cvT\delta x$

$$\frac{\partial(\rho C_P T)}{\partial t} \delta x \delta y$$

$$\left[\rho cuT + \frac{\partial}{\partial x} \left(\rho cuT\right) \delta x\right] \delta y \blacktriangleleft$$

Advection

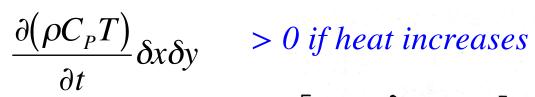

Conduction

$$-k\left(\frac{\partial^2 T}{\partial x^2} + \frac{\partial^2 T}{\partial y^2}\right) \delta x \delta y$$

Spatial, constant ρ , C_P , k, incompressible, no heat production

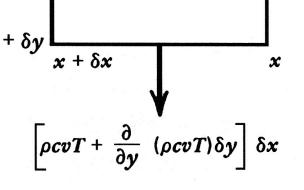

$$\left[\rho cuT + \frac{\partial}{\partial x} \left(\rho cuT\right) \delta x\right] \delta y \blacktriangleleft$$

Advection

$$\left[\frac{\partial(\rho C_{P}uT)}{\partial x} + \frac{\partial(\rho C_{P}vT)}{\partial y}\right] \delta x \delta y \qquad v + \delta y \qquad x + \delta x \qquad x \\
\rho C_{P} \left[u\frac{\partial T}{\partial x} + v\frac{\partial T}{\partial y}\right] \delta x \delta y \qquad of mass \qquad \left[\rho cvT + \frac{\partial}{\partial y}(\rho cvT)\delta y\right] \delta x$$

 $\rho cvT\delta x$

Conduction

$$-k\left(\frac{\partial^2 T}{\partial x^2} + \frac{\partial^2 T}{\partial y^2}\right) \delta x \delta y$$

 $(heat\ out)-(heat\ in),\ i.e.$

 \rightarrow > 0 if more heat out than in

Conservation =>

 $Time\ change\ + Advection\ + Conduction\ = 0$

Spatial, constant ρ , C_P , k, incompressible, no heat production

$$\frac{\partial (\rho C_P T)}{\partial t} \delta x \delta y = \rho C_P \frac{\partial T}{\partial t} \delta x \delta y$$

$$\left[\rho cuT + \frac{\partial}{\partial x} \left(\rho cuT\right) \delta x\right] \delta y \blacktriangleleft$$

Advection

$$\left[\frac{\partial(\rho C_{P}uT)}{\partial x} + \frac{\partial(\rho C_{P}vT)}{\partial y}\right] \delta x \delta y \sim conse$$

$$\rho C_{P} \left[u\frac{\partial T}{\partial x} + v\frac{\partial T}{\partial y}\right] \delta x \delta y \qquad of$$

Conduction

$$-k\left(\frac{\partial^2 T}{\partial x^2} + \frac{\partial^2 T}{\partial y^2}\right) \delta x \delta y$$

$$\frac{\partial \left[\rho c u T \right] \delta x}{\partial x} \left[\frac{\partial y}{\partial x} + \frac{\partial y}{\partial x} \right] \left[\frac{\partial y}{\partial x} + \frac{\partial y}{\partial y} \right] \delta x}$$

$$\frac{\partial \left[\rho c u T \right] \delta x}{\partial x} \left[\frac{\partial x}{\partial y} + \frac{\partial y}{\partial y} \right] \left[\frac{\partial x}{\partial x} + \frac{\partial^2 x}{\partial y^2} \right] \left[\frac{\partial x}{\partial x} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial x} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial x} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial x} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial x} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial x} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial x} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial x} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial x} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial x} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial x} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial x} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial x} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial x} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial x} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial x} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial x} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial y} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial y} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial y} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial y} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial y} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial y} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial y} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial y} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial y} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial y} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial y} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial y} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial y} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial y} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial y} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial y} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial y} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial y} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial y} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial y} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial y} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial y} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial y} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial y} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial y} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial y} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial y} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial y} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial y} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial y} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial y} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial y} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial y} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial y} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial y} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial y} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial y} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial y} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial y} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial y} + \frac{\partial x}{\partial y} \right] \left[\frac{\partial x}{\partial y} + \frac{\partial x$$

 $\rho cvT\delta x$

$$\rho C_P \left[\frac{\partial T}{\partial t} + \mathbf{u} \cdot \nabla T \right] = k \nabla^2 T$$

Energy equation

$$\frac{D(K+U)}{Dt} = W + Q$$

Material derivative internal heat

$$\rho C_P \left[\frac{\partial T}{\partial t} + u \cdot \nabla T \right] = \rho C_P \frac{DT}{Dt} \Rightarrow \frac{D(\rho C_P T)}{Dt}$$

Allowing for spatial variations of material parameters

Heat input

$$k\nabla^2 T \Longrightarrow \nabla \cdot k\nabla T$$

+A

Conduction

Internal heat production

Work done

⇒ Changes in *motion* (kinetic energy) and *internal deformation*

Net effect of
$$W - \frac{DK}{Dt}$$
 becomes $\sigma : \mathbf{D}$

$$\mathbf{D} - \text{strain rate}$$

Energy equation

conservation of heat

I II III IV V VI
$$D(\rho C_p T)/Dt = \nabla \cdot k \nabla T + A + \sigma : D + \alpha T v \cdot \nabla P \dots)$$

- I change in temperature with time
- **II** heat transfer by conduction (and radiation)
- **III** heat production (including latent heat)
- IV heat generated by internal deformation
- V heat generated by adiabatic compression
- VI other heat sources, e.g. latent heat

Conservation equations

- Conservation of mass
 - Kinematics

$$\frac{D\rho}{Dt} + \rho \nabla \cdot \mathbf{v} = 0$$

- Conservation of momentum
 - Dynamics
 - Newton's second law
 - Angular momentum

$$\rho \frac{D\mathbf{v}}{Dt} = \nabla \cdot \underline{\underline{\sigma}} + \mathbf{f}$$

$$\sigma = \sigma^{T}$$

- Conservation of energy
 - First law of thermodynamics

$$\frac{D(\rho C_P T)}{Dt} = \nabla \cdot k \nabla T + A + \mathbf{\sigma} : \mathbf{D}$$

• Entropy inequality Which law is this?

Rate of entropy increase of a particle always \geq entropy supply

Continuum Mechanics Equations

General:

- 1. <u>Kinematics</u> describing deformation and velocity without considering forces
- 2. <u>Dynamics</u> equations that describe force balance, conservation of linear and angular momentum
- 3. <u>Thermodynamics</u> relations temperature, heatflux, stress, entropy

Material-specific

4. <u>Constitutive equations</u> – relations describing how material properties vary as a function of T,P, stress,.... Such material properties govern dynamics (e.g., *density*), response to stress (*viscosity*, *elastic parameters*), heat transport (*thermal conductivity*, *heat capacity*)

1-D advection-diffusion solution

$$-v_z \frac{\partial T}{\partial z} = \kappa \frac{\partial^2 T}{\partial z^2} \qquad \kappa = \frac{k}{\rho C_P}$$

Take
$$f(z) = \frac{\partial T}{\partial z}$$
 and $c = \frac{v_z}{\kappa}$

Then
$$\frac{\partial f}{\partial z} = -cf(z)$$

$$\Rightarrow$$
 This yields $f(z) = f(0)e^{-cz}$, i.e.

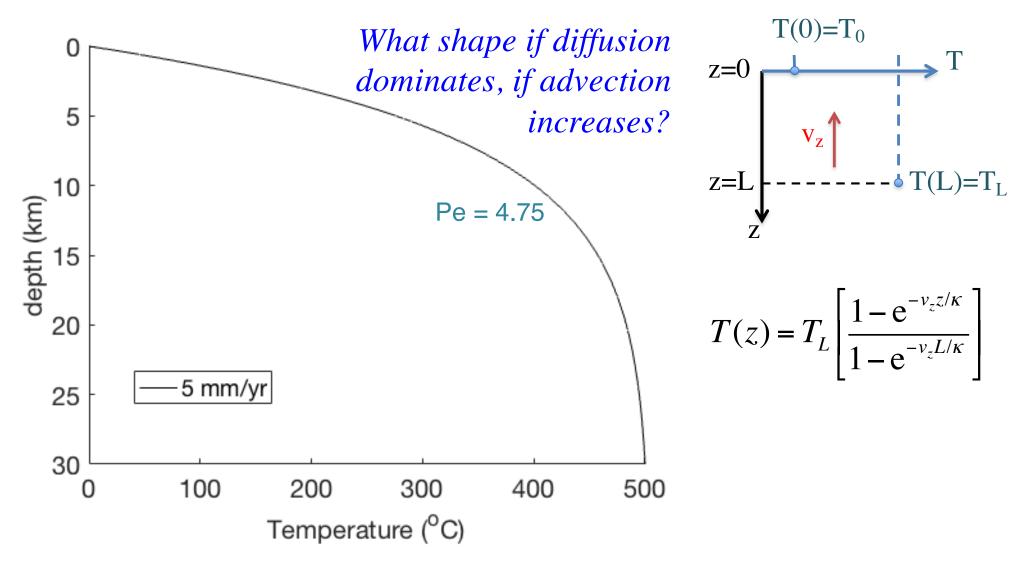

$$z=0$$
 v_z
 $z=L$
 $z=depth$
 $z=depth$

$$\Rightarrow \text{This yields} \quad f(z) = f(0)e^{-cz} \text{ , i.e.} \quad \frac{\partial T}{\partial z}(z) = Ae^{-v_z z/\kappa} \qquad \text{where } A, B \\ T(z) = B - \frac{A}{v_z/\kappa}e^{-v_z z/\kappa} \qquad \text{integration constants}$$

For constant temperature boundary conditions T(z=0)=0 and $T(z=L)=T_L$

$$\Rightarrow \text{Integration gives:} \qquad T(z) = T_L \left[\frac{1 - e^{-v_z z/\kappa}}{1 - e^{-v_z L/\kappa}} \right]$$

1-D advection-diffusion solution

Peclet number, measure of relative importance advection/diffusion

$$Pe = \frac{v_z L}{\kappa} = \frac{[(m/s)m]}{[m^2/s]}$$

Take a break

- Use *Exercise 3* in *chapter4.ipynb* to look at the shape of the solutions
- Exercise 4 for afternoon workshop
